DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 10, 11, and 13-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Madden et al. U.S. Patent No. 6,516,239. Madden et al. discloses a method and apparatus for manufacturing products in a plurality of types having different specifications, the method comprising: a) manufacturing products from intermediate products; b) adding address information to the products, each address information uniquely identifying a respective intermediate product before the intermediate product is used in step a); and c) transferring the products together with the address information from a plurality of feed means to a single feed line via a transfer means; wherein a sequence of the transferring in step c) is determined by storing a preceding address information in a memory associated with the transfer means, the preceding address information being the address information of a preceding one of the products that has been transferred to the single feed line, and transferring a subsequent one of the products to the single feed line, the subsequent one of the products having address information in a predetermined relationship to the preceding address information;

Art Unit: 2125

wherein the address information comprises positional information on the intermediate products which become the products (e.g. col. 3 line 34 – col. 5 line2).

Allowable Subject Matter

3. Claim 12 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art does not teach or fairly suggest, in combination with claims 10 and 11, that the positional information comprises slit numbers successively defined in a first direction of cut webs as said intermediate products and block numbers successively defined in a second direction which is substantially perpendicular to the first direction.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
